

MOO GOO

Materials

- 1 tablespoon liquid starch
- 2 tablespoons white glue
- 3 drops food coloring
- Plastic eggs

DIRECTIONS

1. Put the starch in a bowl.
2. Add glue and let set for five minutes.
3. Add food coloring.
4. Mix until starch is absorbed and color is spread smoothly. (The more you mix, the better it gets.)

Agriculture Connection:

- Starch is a by-product of corn
- Glue contains animal by-products

The resulting putty can be bounced, used to pick up pictures from comics or newspapers, and molded into shapes.

Tips:

- Store in plastic egg overnight before using to pick up pictures from comics.
- If left in open air, the putty will melt then turn hard.
- Add a teaspoon more starch for a tougher, more rubbery putty.
- Putty will last for several days if stored in an airtight container.
- If putty dries out or gets tough, just dip into warm water and knead until soft.
